Structural annotations in the historical dark-family dN/dS>1 screen
A. Structural decodability of the 148 dN/dS>1 families
dN/dS>1 screen-tail families

Structurally dark
(no homolog)
Homolog,
low confidence
Confident
structural homolog
B. Structural annotations include recognition/binding hypotheses (
recognition / binding / surface / transport hypothesis
uncharacterised / other
Toxin-like peptide (tamapin scorpion toxin fold)
Carbohydrate-binding lectin (Photorhabdus PHL)
DNA-binding regulator (Arg repressor)
Solute uptake (ABC transporter NosDFY)
Lipid/cell-surface carrier (LprG)
Uncharacterised conserved (DUF/orphan)
